

Dare to Dream

What compels someone to embark on the unknown? To stand on the precipice of that which has never been done before — that which some would say couldn't be achieved? At TAE, we're compelled by the possibility of delivering a carbon-free power source that would revolutionize energy access around the world. We have a vision for a future with safe, abundant, hydrogen-boron fusion, and we're daring to climb this clean energy Everest to create a better tomorrow. Reaching the summit will be a challenge of perseverance, vision and determination, but at TAE we believe a goal is only impossible until it's accomplished.
