

# Dare to Dream

What compels someone to embark on the unknown? To stand on the precipice of that which has never been done before — that which some would say couldn't be achieved? At TAE, we're compelled by the possibility of delivering a carbon-free power source that would revolutionize energy access around the world. Whether it's in the backcountry or the physics lab, a goal is only impossible until it's accomplished. We at TAE stand with the Natural Selection Tour in daring to reach beyond today's limits of human ability to create a brighter tomorrow.
