

98746735 - TAE

Good Clean ENERGY

With access to abundant fusion power,
a brighter future is possible

Imagine a world without pollution, extraction and scarcity - a world powered by good, clean energy. A world in which reliable fusion power complements wind and solar, providing unlimited on-demand electricity. That's what TAE has been working toward since 1998. We're unlocking the power of the sun and stars right here on Earth with hydrogen-boron - the safest, most sustainable form of fusion. In the fusion-powered future, you can flip on a light and cool off your home without a second thought about your carbon footprint. TAE's emissions-free, radioactive-free fusion power is not just clean energy; it is a pathway to a bright and energetic world.
